Experience

2018–2021

OPTUS
Senior Front-End Engineer

DURATION: 3 years, 8 months
INDUSTRY: Telco
LOCATION: Macquarie Park, Sydney

Optus rebuilt their online store from scratch and I joined on a 6-month contract to help with that project. They then asked me to stay on to rebuild other products as they transitioned to React.

- Took the lead on implementation of *LUX*, the company-wide React component framework that is now used for all new projects.
- Total rebuild of their customer 'My Account' dashboard into React.
- Maintained 90% unit test coverage on all code.
- Jointly ran UX prototype sessions for customers with design team, followed up with rapid iteration from customer feedback.
- Created integration test build checks with Cypress.
- Page performance audit and monitoring using Lighthouse.
- Many other products built in React: SIM activation, 'My Profile' pages, account add-on configuration, live chat integration.

2014–2018

OPENAGENT
Front-End Engineer

DURATION: 3 years, 6 months
INDUSTRY: Real Estate
LOCATION: Alexandria, Sydney

Implementation and rapid iteration of web applications for the growth team. Often we'd have an idea in the morning and then have a prototype out collecting data from customers by the afternoon.

- Built their main customer conversion funnel. Took what was once static forms and made it an interactive experience.
- Split tests and conversion optimisation through analytics.
- Generated their long tail of thousands of SEO pages.
- Many other products built: commission calculator, property report generator, corporate blog, agent awards platform and more.

EDUCATION

2014
Bachelor of Software Engineering
University of Sydney
